Remarks and examples

See [G-2] [graph manipulation](#) for an introduction to the graph manipulation commands. See [P] [window manage](#) for a discussion of how Stata's windowed interface is accessed.

`graph close` closes Graph windows, allowing users to easily manage Stata's windowed interface. `graph close` can also be used to move through series of graphs. After each graph is examined, it can be closed without manually closing the Graph window. `Graph` is the default name of the graph.

```
. graph twoway scatter faminc educ, ms(p)
. ...
. graph close Graph
. ...
. graph close Graph
```
