

**window push** — Copy command into History window

## Description

`window push` copies the specified *command-line* onto the end of the command history. *command-line* will appear as the most recent command in the `#review` list and will appear as the last command in the History window.

## Syntax

```
window push command-line
```

## Remarks and examples

`window push` is useful when one Stata command creates another Stata command and executes it. Normally, commands inside ado-files are not added to the command history, but an ado-file such as a dialog interface to a Stata command might exist solely to create and execute another Stata command.

`window push` allows the interface to add the created command to the command history (and therefore to the History window) after executing the command.

```

----- begin example.do -----
program example
  version 18.0           // (or version 18.5 for StataNow)
  display "This display command is not added to the command history"
  display "This display command is added to the command history"
  window push display "This display command is added to the command /*
    */ history"
end
----- end example.do -----

. example
This display command is not added to the command history
This display command is added to the command history
. #review
3
2 example
1 display "This display command is added to the command history"
.

```
